"Candlesticks Simplified For Greater Profits"

1 Instant Access To Relevant Market Data

The **CandleBox** feature allows users to instantly view price data, indicator data, candlestick formations, CandleVision Flags and the BLM Technical Indicator results simply by moving the mouse pointer over any chart.

2 Simple, Organized User-Interface

Enhanced **menus**, **speed buttons**, **hot-keys** and **pop-up menus** provide for greater ease of use. Now, users can access the PFP's features through four unique user-interfaces. Everything is clearly organized and structured.

3 Eloquent Candlestick Charts

Quickly and easily chart any Equity, Commodity, Index or Mutual Fund in Candlestick or bar chart form. **Chart Tabs** and **WorkSpaces** allow users to configure multiple desktops of charts for better organization and ease of use.

4 Interactive Pattern Recognition and "Flash-Card" Training

Quickly learn to understand and trade using *Japanese Candlesticks* and *specialized Break-Out systems* with "Flash-Card" type interactive analysis. Provides detailed **pattern descriptions**, **titles**, **proper actions**, **stop placement levels** and **color-coded pattern signals**. Simply double-click on any candle to start learning and trading with the PFP programs.

5 CandleWatch and CandleVision

Super fast CandleWatch and CandleVision scans allow users to manage large amounts of data easily. The **CandleWatch** feature scans unlimited charts for current trading signals while the **CandleVision** feature back-tests single charts for historical trading signals. Both these features provide detailed sorting and reporting capabilities. *(Only Available in the PFP 2.0 Program)*

6 Sort, Query and Report with the Watch/Vision Table

Imagine, finding any pattern in any market instantly, or finding all the Buy Signals in hundreds of charts instanltly with the Watch/Vision Table. Next, **apply custom Queries** based on Price or Indicator values, then **Sort** and **Report** the results of your search. Super-powerful, super-fast tools for professional investors. *(Only Available in the PFP 2.0 Program)*

7 Detailed Information Right At Your Fingertips

Instant access to detailed market analysis, chart settings, library settings, technical indicator settings and much, much more. **Not "just a charting tool"**, the PFP program provides all the advanced features and detailed pattern recognition you need to profit from the markets - at prices you won't believe. Find out why our users "Swear" by it.

Intelligent Investment Analysis Tools
From Matheny Enterprises

Over the past Decade we have been developing the world's finest Japanese Candlestick analysis and trading tool. We never lost focus of the fundamental teachings of the Japanese Candlestick technique and have attempted to replicate the theory within the analysis capabilities of our software applications.

The difficulty in developing these applications was the fact that they must be able to not only properly identify the patterns, but also teach the users how to recognize and trade these patterns. The result is a continually evolving intelligent investment analysis tool with a pattern library of over 1100 patterns that teaches users to understand and trade using

Candlesticks. Using the time-tested "Flash-Card" teaching theory, users quickly and easily learn the advanced techniques of the PFP programs.

Throughout the development of the PFP applications, new specialized trading systems were developed to compliment the Japanese Candlestick technique. These techniques have become very popular with my users as they are easy to understand and very effective in the

markets. The combination of Japanese Candle-sticks and these specialized libraries makes the PFP program unstop-pable.

Specialized Libraries Include...

- G. Strubbe TC/BR System
- T. DeMark Sequential Theory
- T. Hikita Candlestick Library
- F. Tam Candlestick Library
- ASL Break-Out System Library
- BLM Technical Indicator Library
- BLAM Break-Out System Library
- Fractal System Library
- Bollinger Band Library

Professional traders need a software application that can handle an unlimited number of charts and quickly scan or back-test charts for trading signals. These requirements are fulfilled with the CandleWatch and CandleVision features

Reads The Following Datafile Types

Advanced GET	Primate
AIQ	Prophet
ASCII Files	SuperCharts
Aspen Graphics	TC2000
Metastock	Telescan
MSO Data	Trader's Access
& More...	

- which provide fast and effective scanning and reporting of price patterns spanning an unlimited number of charts.

Beyond all of the analysis features of the PFP program are the charting features. The PFP program provides eloquent Candlestick and bar charts as well as customizing & plotting of common Western technical indicators. The PFP programs also include a "virtual desk-top" feature called WorkSpaces - where users can define multiple Chart Tabs and place multiple charts onto the Chart Tabs. The result is a truly interactive and effective means of managing large number of charts easily and quickly.

As you can imagine, we are very proud of our advanced applications - and believe you will honestly be amazed at the interpretative abilities of the PFP programs. We invite you to *"see for yourself"* what my applications can do for your trading.

You can get started for as little as $25 per month (*for the PFP 2.0*), or a $149 purchase (*for the PFP 1.0*). Experienced or novice traders will benefit from using the PFP applications. In most cases, a single profitable trade will more than pay for your purchase of the PFP program.
