MRM vs. SPY Performance Tracker

The MENT.COM Rotational Modeling system trades a Daily & Weekly account (two separate accounts) in order to achieve these results. This allows the system to act independently on Daily vs. Weekly triggers and provides the greatest opportunities for traders/investors. The MRM system only trades the SPY in this example. Allocating a portion of your capital into 2x ETFs, or correlated Sector ETFs, may improve these results. The objective of the MRM strategy is to stay conservative while taking advantage of opportunities when they exist with stronger price trends.

The MENT MRM Advantage Is Clear

[Visit ment.com to learn more](https://www.ment.com)

The MENT.COM Rotational Modeling system is a proprietary adaptive learning strategy that attempts to learn from past price/technical conditions/trends. It requires two accounts to execute properly. Past performance does not guarantee future performance. There are risks associated in trading/investing. See full disclaimer @ www.ment.com.
